ABSTRACT

Piping is an important part on the ship. There are many systems that work inside the ship, and the systems is almost entirely in direct contact with the piping. Not all types of pipes that can be used for a system inside the ship, but it must pipe with certain quality standards and has been certified and declared eligible by class or other accredited standards. One system that uses pipes are domestic water system (sanitary system), where Domestic water system is a water distribution system (fresh water) in the vessel used by the crew to meet the needs of drinking water and cooking, for bathing, washing and others. For the needs of the WC (water closed) system used sea water (sea water) is supplied to each deck has a bathroom. Sanitary system becomes important and the main requirement for the daily needs of the crew. Without the sanitary system, it is certain that the vessel would be very uncomfortable for occupancy.

The use of pipe for domestic water systems on ships generally use type cast iron pipe. Due to this type of pipe material characteristics that are well suited to the environmental conditions that existed at the ship, such as resistance to vibration, pressure, and temperature are working on a ship environment. However, the characteristics of the cast iron pipe should be found wanting in the form of the rather expensive price. Thus in this study will be analyzed testing of PVC pipe as the pipe is used as an alternative to domestic water piping system.

Selection of PVC as an alternative material because the material PVC pipe would benefit costs are cheaper, but in use on board, PVC pipes also have to first be able to withstand the pressure, temperature and other characteristics that exist in the vessel. It would require some testing such as test material in PVC pipe. The results of these tests if the PVC proved to be feasible to be used for domestic water system on the vessel then will be analyzed costs, both material costs, operating costs, the cost of installation and maintenance.

The results of technical analysis (testing the strength of materials) and the results of the cost analysis is what will be the final outcome of this study to answer whether the PVC pipe can actually be an alternative for domestic water pipe system on the vessel. Presentation of engineering analysis and economic analysis will be a table or chart the data.

ABSTRAK

Pipa merupakan bagian penting di kapal. Ada banyak sistem yang bekerja di dalam kapal, dan sistemnya hampir seluruhnya bersentuhan langsung dengan perpipaan. Tidak semua jenis pipa yang bisa digunakan untuk sistem di dalam kapal, tapi harus disambung dengan standar kualitas tertentu dan telah disertifikasi dan dinyatakan layak standar kelas atau terakreditasi lainnya. Salah satu sistem yang menggunakan pipa adalah sistem air dalam negeri (sistem sanitasi), dimana sistem air domestik adalah sistem penyaluran air (air tawar) di kapal yang digunakan oleh awak kapal untuk memenuhi kebutuhan air minum dan memasak, untuk mandi, mencuci dan lain-lain. Untuk kebutuhan WC (water closed) sistem yang digunakan air laut (sea water) yang dipasok ke masing-masing dek memiliki kamar mandi. Sistem sanitasi menjadi penting dan kebutuhan utama untuk kebutuhan sehari-hari para kru. Tanpa sistem sanitasi, sudah pasti kapal tersebut akan sangat tidak nyaman untuk hunian.

Penggunaan pipa untuk sistem air dalam negeri pada kapal umumnya menggunakan pipa besi cor tipe. Karena karakteristik material pipa jenis ini yang sesuai dengan kondisi lingkungan yang ada di kapal, seperti ketahanan terhadap getaran, tekanan, dan suhu, bekerja pada lingkungan kapal. Namun, karakteristik pipa besi cor harus dicari dalam bentuk harga yang agak mahal. Dengan demikian dalam penelitian ini akan dianalisis pengujian pipa PVC karena pipa tersebut digunakan sebagai alternatif sistem perpipaan air domestik.

Pemilihan PVC sebagai bahan alternatif karena bahan pipa PVC akan menguntungkan biaya yang lebih murah, namun di gunakan di atas kapal, pipa PVC juga harus terlebih dahulu mampu menahan tekanan, suhu dan karakteristik lain yang ada di kapal. Ini akan membutuhkan beberapa pengujian seperti bahan uji di pipa PVC. Hasil pengujian ini jika PVC terbukti layak untuk digunakan untuk sistem air domestik di atas kapal maka akan dianalisis biaya, baik biaya material, biaya operasi, biaya pemasangan dan perawatan.

Hasil analisis teknis (pengujian kekuatan material) dan hasil analisis biaya adalah apa yang akan menjadi hasil akhir penelitian ini untuk menjawab apakah pipa PVC sebenarnya bisa menjadi alternatif sistem pipa air domestik di kapal. Presentasi analisis teknik dan analisis ekonomi akan menjadi tabel atau grafik data.

PREFACE

Praise Allah SWT the Almighty for all the many blessings, who gives intelligent, strength, health and favors for the author to be able to finish this bachelor thesis. Appreciation is also extended to all those who have contributed to and assisted in the writing of this bachelor thesis. Gratitude is given to:

1. Mr. Dr. Eng. M. Badrus Zaman, S.T, MT. as Head Department of Marine Engineering FTK-ITS, Surabaya.
2. Mr. Ir. Dwi Priyanta, MSE as Secretary of Double Degree Marine Engineering Program also as advisor in this bachelor thesis who have a lot to give aid knowledge and preparation of this bachelor thesis.
3. Mr. Ir. Hari Prastowo, M.Sc. as advisor in this bachelor thesis workmanship that has provided meaningful assistance, tireless guidance, patience and motivation.

The author hoped this bachelor thesis is able to contribute to the knowledge, experience for the readers, and information for them to know the benefit that can be an alternative to replace PVC pipe galvanized pipes for domestic water systems on ships.

The thesis author acknowledged that there are deficiencies caused by the lack of experience. Therefore the author expects readers to provide inputs that may be beneficial for this paper contribution.

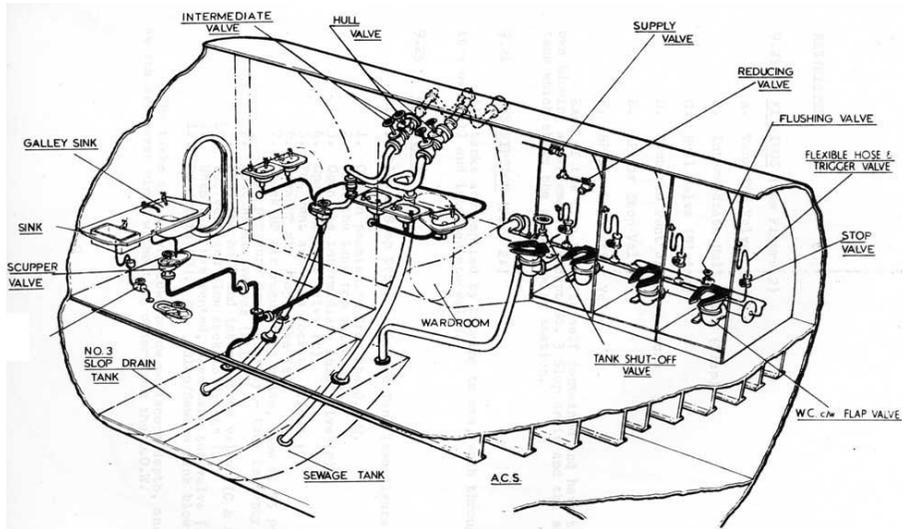

Figure 1.2. Sanitary system In the deck²

All types of pipes inside the ship comply to class rules. Every pipe material is classified based on pressure and temperature. The class recommends galvanized pipe. Including the use of sanitary pipes on ships using galvanized pipe. Which Galvanized have excellent material strength. However, the high material strength make galvanized pipe become very expensive. Thus, it also makes the price of shipbuilding to be expensive.

Table 1.1 Classes of piping system³

| Classes of Piping System | | | | | | |
|--|-----------------------|----------|------------------------|-----------|------------------------|-----------|
| Piping System For | Class I ¹⁾ | | Class II ¹⁾ | | Class II ¹⁾ | |
| | p (bar) | t (°C) | p (bar) | t (°C) | p (bar) | t (°C) |
| Steam, thermal oil | > 16 | or > 300 | ≤ 16 | and ≤ 300 | ≤ 7 | and ≤ 170 |
| Fuel Oil, lubricating oil, flammable hydraulic oil | > 16 | or > 150 | ≤ 16 | and ≤ 150 | ≤ 7 | and ≤ 600 |
| Other media ²⁾ | > 40 | or > 300 | ≤ 40 | and ≤ 300 | ≤ 16 | and ≤ 200 |

² C.F. 'O' Class Submarines - Miscellaneous Systems and Equipment, describes ten of the systems aboard Oberon class submarines

³ DNV, "RULES FOR CLASSIFICATION OF SHIPS NEWBUILDINGS, MACHINERY AND SYSTEMS, DNV PART 4 CHAPTER 6"

Table 1.1 Classes of piping system³

| Classes of Piping System | | | | | | |
|---|-----------------------|--------|------------------------|--------|------------------------|--------|
| Piping System For | Class I ¹⁾ | | Class II ¹⁾ | | Class II ¹⁾ | |
| | p (bar) | t (°C) | p (bar) | t (°C) | p (bar) | t (°C) |
| p = Design pressure, as defined in Sec.6 A 303 t = Design temperature, as defined in Sec.6 A.304 | | | | | | |
| 1) For class II and III piping both specified condition shall be met, for class I piping one condition only is sufficient. 2) Cargo oil pipes on oil carriers and open ended pipes (drain, overflows, vents, boiler escape pipe, etc.) independently of the pressure and temperature, are pertaining to class III. 3) Cargo piping systems for flammable liquids on Offshore Supply Vessels are pertaining to the same pipe class as fuel oil systems. Outside Machinery spaces of Category A, class II piping is sufficient. | | | | | | |

That is why we need an innovation to reduce the cost of shipbuilding. Innovation to replace galvanized pipe with other type of pipe to be used in the sanitary system is possible to help reducing the cost of production and maintenance of the ship. The other types of pipe are PVC as an alternative to galvanized pipes. Although the PVC pipe should also have special specifications for use in the marine industry, the value of the price is cheaper.

Plastic pipe / PVC pipe can be used for sanitary systems, where sanitary piping may be made of plastic, using plastic welded joints. The use of plastic pipes elsewhere in a system is restricted because of the requirement to pass a standard test for fire-resistance. In addition, it is not needed to use a high pipe specification in the sanitary system, as long as the pipe specification is sufficient with pressure and temperature level that are not too high. In addition, the use of PVC pipe for this alternative is only used for sanitary systems in superstructure. Thus, the use of PVC pipe is considered good for the sanitary system.

1.2. Statement of Problems

Based on the description above the statement problem of this thesis are:

1. Class requires certain pipe materials, which are galvanized or steel pipe.
2. For system that allowed for not using galvanized (e.g using sanitary system for alternative material)?
3. PVC can be used.
4. What kind method to testing PVC pipe?
5. PVC property compares to galvanized.

6. If PVC is applied, any specific concerned?
7. Any modification installation for using PVC?
8. What about the procurement and installation cost of PVC and Galvanized?
9. Has PVC been qualified as an alternative to galvanized?

1.3. Research Limitation

To get the focus of the research, it is required to have several limitations problem. Restrictions of such problems are:

1. The cost analysis which will be involving initial cost (material & installation cost) as well as operation cost (maintenance & repair cost).
2. The focus research is not analyzing the fluid flow in a pipe.
3. Use BKI and DNVGL Class rules.

1.4. Research Objectives

As in the analysis, there will be some objectives, which are:

1. To Analyzing the use of PVC pipe material to be applied to sanitary system in terms of strength and installation onboard.
2. To comparing the PVC pipe (property, system to modify, material strength) to Galvanized.
3. To analyzing the cost of the use of PVC in marine application. The analysis includes the cost of material, installation, maintenance & repair.
4. To analyzing the material and initial cost comparison between the galvanized pipe and PVC pipe.

1.5. Research Benefits

The results of a comparative analysis of the piping cost between PVC pipe and galvanized pipe, and the generated profit that can be utilized by industry, especially the shipbuilding industry. The advantages are:

1. Knowing the cost comparison galvanized pipe with PVC pipe.
2. Knowing the comparative cost of maintenance and operational between galvanized pipe and PVC pipe.

CHAPTER 2

LITERATURE STUDY

2.1. Selecting a Ship

Selection of ships carried out as research objects. Therefore, the sanitary system to be examined comes from a particular ship type. It is intended to facilitate research. In this thesis, the vessel chosen was MV. Sinar Sabang. MV Sinar Sabang is a container ship that has a shipping line route in Singapore - Surabaya, where the ship has a schedule to anchoring on every Saturday and Sunday at the port of Surabaya. MV. Sinar Sabang ship will become the object of the research about sanitary pipe system. MV. Sinar Sabang is chosen because it is under the management of PT. Samudera Indonesia Ship Management, which is this ship gets an excellent treatment, the ship data is still incomplete, and the size of the ship that is eagerly great very exciting to be selected as the object of the research on sanitary system of the ship.

Figure 2.1. MV. Sinar Sabang¹

¹ <http://www.shipspotting.com/gallery/photo.php?lid=1016303>

Principal dimensions:

- Type : Container
- Name : Sinar Sabang
- Built : 2008
- Flag : Singapore
- Size : 166 x 27 m
- Gross Tonnage : 18321 t
- Draft : 10,9 m
- Deadweight : 23350 t

2.2. Collecting Data

2.2.1. Galvanized Pipe

Galvanized steel or iron is a traditional piping material in the plumbing industry for the conveyance of water and wastewater. The term "galvanizing" once is referred to hot-dipped galvanizing, in other words is a total immersion in molten zinc after pretreatment cleaning. This technology affords a reasonable level of internal and external protection to the metal pipe. The use of galvanized steel or iron as a conduit for drinking water is a greater problem where the water flow is slow or static for periods of time due to rust discoloration caused by internal corrosion.²

Figure 2.2. Galvanized Pipe³

| Modulus of elasticity | 193 | GPa |
| Surface resistance | 720 | ohm |

2.2.2. PVC (Polyvinyl chloride)

Polyvinyl chloride is a thermoplastics material, which consists of PVC resin compounded with varying proportions of stabilizers, lubricants, fillers, pigments, plasticizers and processing aids. Different compounds of these ingredients have been developed to obtain specific groups of properties for different applications. However, the major part of each compound is PVC resin. The technical terminology for PVC in organic chemistry is poly (vinyl chloride): a polymer i.e. chained molecules of vinyl chloride. The brackets are not used in common literature and the name is commonly abbreviated to PVC. The common terminology is used throughout this publication. Where the discussion refers to a specific type of PVC pipe, that type which it will be explicitly identified as

⁴ PVC Wavin

detailed below. Where the discussion is general, the term “PVC pipes” will be used to cover the range of PVC pipe materials in this manual.⁵

Figure 2.3. Marine PVC pipe⁶

Plastic pipe is a tubular section, or hollow cylinder, made of plastic. It is usually, but not necessarily, of circular cross-section, used mainly to convey substances, which can flow — liquids and gases (fluids), slurries, powders and masses of small solids. It can also be used for structural applications; hollow pipes are far stiffer per unit weight than solid members.

Plastic pipe systems fulfill a wide variety of service requirements. These requirements are precisely described in a complete set of European Product Standards for each application alongside their specific characteristics.

For example:

- Conveyance of drinking water: Hygienic requirements
- Conveyance of gas: Highest Safety requirements
- Plastic pipes for radiant heating and floor heating: Temperature resistance over decades
- Sewer applications: High chemical resistance
- Highly-resistant to corrosion, abrasion and chemicals

⁵ (Vinidex Pty Limited, PVC Pressure Pipe & Fittings Technical Manual)

⁶ Gourg Fischer Piping Systems Brochure

- Strong, durable, flexible and lightweight
- Longer-length pipe with leak-proof joints
- Lower labor requirements for installations
- Significant overall cost savings
- Long lifetime
- Reliability and safety

The advantage from plastic pipe material, besides installation is much faster, is plastic offers the possibility of pre- fabrication, which radically reduces installation time on board. Plastic enables installations with a small amount of tools in a small amount of space. Technical specialists are not always required. That is another significant benefit. Plastic is also lighter than steel pipes.

Table 2.2. Weight Comparison⁷

| Kg | Pipe Diameter | | | |
|--------------------------|---------------|------------|------------|-------------|
| | D 25 | D 50 | D 110 | D 160 |
| Plastic | <u>16</u> | <u>53</u> | <u>248</u> | <u>550</u> |
| Carbon Steel | <u>119</u> | 233 | <u>737</u> | 1093 |

| Copper | 59 | <u>292</u> | <u>747</u> | - |
| Savings Plastic to Steel | <u>103</u> | <u>239</u> | <u>489</u> | <u>992</u> |

Type of PVC pipe that will be used must be the type of pipe that has been set by the class. On GL rules classification, the use of plastic pipes is arranged in part 1 chapter 2, section 11, where the plastic pipe should be approved for piping systems that included in pipe class III only. The use of plastic pipes should also be qualified based on to their fire endurance that it has to be classified at level 1 to level 3. Fire endurance level is a dry piping that have been passed the test for a minimum duration without loss of integrity. Level 1 is one hour long, level 2 is 30 minutes, and level 3 is 30 minutes in wet condition.

⁷ Gourg Fischer Piping Systems Brochure

"Guidelines for the Application of Plastic Pipes on Ships" except for the requirements for smoke generation and toxicity.

The minimum nominal of external pressure for a plastic pipe is 1 bar and must be determined by dividing the collapse test pressure by a safety factor of 3. The nominal internal pressure for a plastic-pipe should be determined by dividing the short-term hydrostatic test failure pressure by a safety factor of 4, or the long-term hydrostatic (> 100 000 h) test failure pressure by a safety factor 2.5 which is lesser. Plastic pipe temperature limits and pressure reductions are indicated in Table A7. The limits may be extended on basis of acceptable documentation from the pipe manufacturer. The permissible temperatures are stated for long term service. Short periods of marginally higher temperatures may be accepted by case to case considerations.⁹

2.3. Sanitary Pipe System Analyzing

Sanitary systems or can be called domestic water system is a water distribution system (fresh water) in the vessel used by the crew to meet the demand for drinking water and cooking, for bathing, washing, etc. As for the need in the WC (water closed), then the planning system uses the same system of fresh water is supplied to each bathroom. Both systems have the basis of above services work the same when using an automatic

¹¹ DNV, "Rules For Classification Of Ships Newbuildings, Machinery And Systems DNV Part 4 Chapter 6 A 700"

pump for supplying fluid to the tank which already has a pressure (hydropore) supplied from the compressed air system. Compressed air is planned to have a head and a pressure sufficient to supply water to the place that entails, including bathrooms, laundry room, galley, and a washbasin. Pumps operated automatically by switching the pressure that works based on the desired level of water. (Taylor)

Sanitary pipe used to remove water from the deck and to remove water that has been used from places a shower, dry cleaners, bars food and beverage, kitchen, warehouse, and so has a special specification. Sanitary pipe diameters are between 50-150 mm, planned sanitary pipe diameter is 100 mm (3 ") with a thickness of 4.2 mm.

Sanitary pipes that are used on different ships with sanitary pipe specifications are used on land. Specifications use all types of pipes on the vessel using pipe specifications that have been set by the class, including for sanitary piping system. One class that regulates the use of the sanitary pipe is BKI Volume III.

BKI Volume III, which regulates plumbing materials generally, should be resistant to corrosion either on the inside or on the outside. The results showed no solid impurities floating, colored, and pollute the surrounding water. Thus, the right choice for piping sanitary system is galvanized pipe.

2.3.1. Selecting Galvanized and PVC Material

The selecting of material is intended to determine the calculation of the sanitary pipe selection specifications. Selecting of galvanized pipe must be adapted to the original pipe on the ship. Likewise, the selection of pvc pipe must be adapted to the original pipe on the ship. Pipe material selection is done by calculating the diameter of the pipe. Where the pipe diameter calculation using the formula:

$$\begin{aligned}
 Q &= A \times v && \dots\dots\dots (2.1) \\
 &= \pi \times dH^2 / 4 \times v \\
 dH &= (Q \times 4 / \pi \times v)^{1/2}
 \end{aligned}$$

Where =
 Q = ballast Pump capacity
 A = area of pipe

V = flow velocity (2-4) m/s
 dH = main Pipe of Diameter

For PVC pipe also calculate the wall thickness. Wall thickness calculation intended to determine the minimum thickness requirements on a pvc pipe. Where to calculate pvc pipe wall thickness is using the formula:

$$S = S_o + c + t + b \quad \dots\dots\dots (2.2)$$

Where =

- S = minimum thickness required [mm]
- S_o = calculated thickness [mm]
- C = allowance for corrosion [mm]
- T = allowance for manufacturing tolerance [mm]
- B = allowance for bending [mm]

To get the value of S_o, can using the formula:

$$S_o = (d_a \cdot P_c) / (20 \cdot \sigma \cdot v + P_c) \quad \dots\dots\dots (2.3)$$

Where =

- S_o = calculated thickness [mm]
- d_a = outside diameter [mm]
- v = weld efficiency factor
- P_c = design pressure [bar]
- Σ = max permissible design stress [N/mm²]
 is to be taken from the lowest value of the followings :
 - σ : R(at)/2.7
 R(at) = spec'fd min tensile strength at ambient temperature
 - σ : E(t)/1.6
 E(t) = spec'fd lower yield strength, or 0.2% proof stress at design temperature
 - σ : S_r/1.6
 S_r = ave'ge stress to produce rapture in 100 000 hrs at the design temperature

In the sanitary system, the value of wall thickness on galvanized pipe can simply use the calculation results classification rules. As for wall thickness galvanized pipe accordance data on DNV GL.

2.3.2. Original Data Analyzing

Data analysis is carried out between the galvanized and pvc pipes that have been chosen with the original pipe. Where, galvanized and pvc pipe will be analyzed whether the accordance with original pipe on the ship. This is carried for the selection of specification of galvanized and pvc pipe is not far from the original pipe specifications.

The analyzed data is data of the thickness of the pipe and the pipe diameter of the original pipe. Analysis of the original pipe with galvanized and pvc pipe is what will go into the calculation stage, Where this calculation phase will go into Chapter 4. This analysis will determine whether technically pvc pipe can be used for sanitary system on the ship or not. If the calculation is acceptable with the original data, then the galvanized and pvc pipe will have to be used on the ship.

2.4. Economical Data Analysis & Comparison

Economical data analysis done after selecting galvanized and pvc pipe. Further economic analysis cost analysis galvanized steel and pvc. Analysis of data taken from galvanized and pvc pipe prices in the market. It also carried out an analysis of the cost of installation and maintenance of galvanized and pvc pipe. Once it is done comparative material costs, installation and maintenance of galvanized and pvc. It is intended to figure out which is the material is more economic.

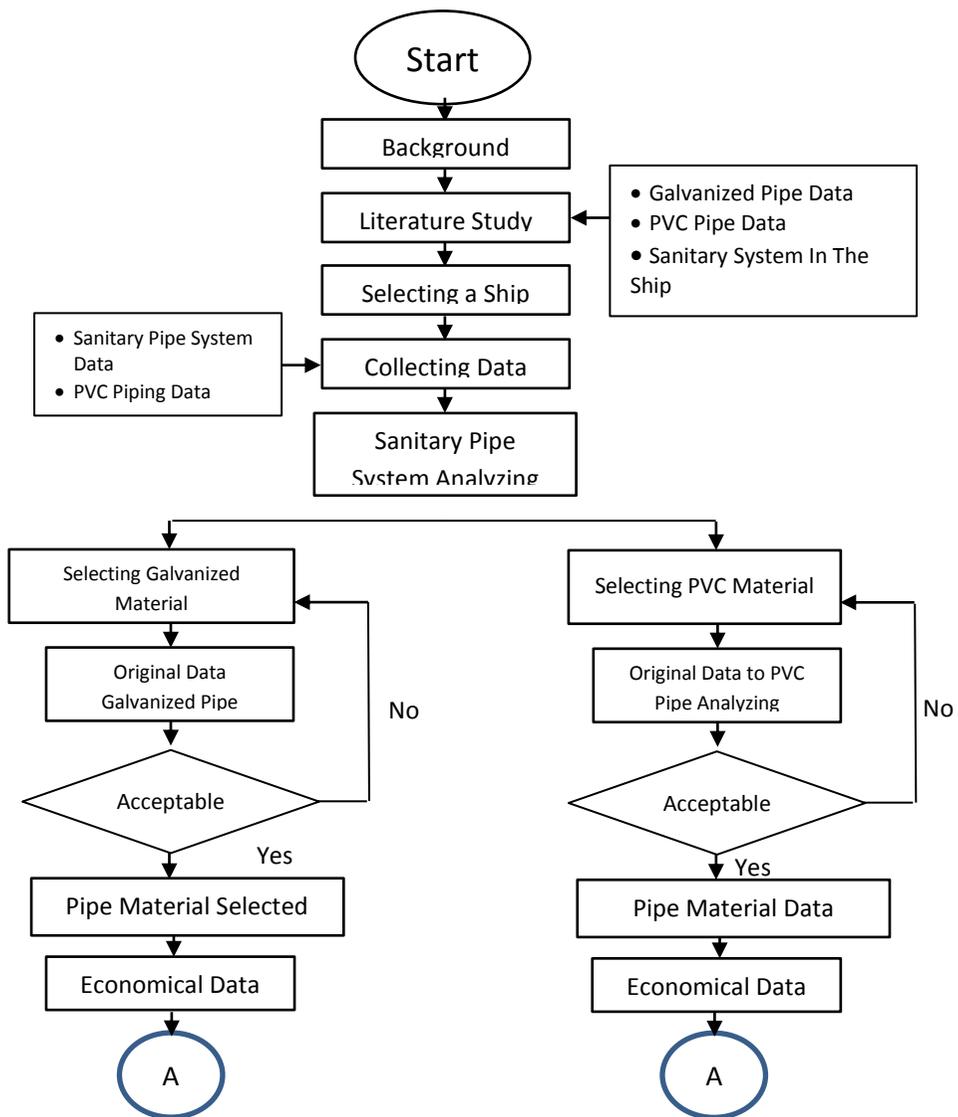

2.5. Conclusion

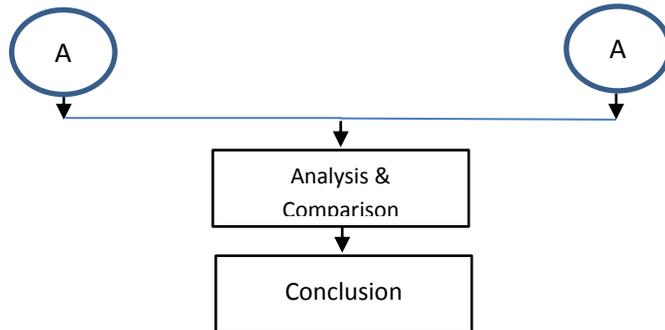

The conclusion contains short summary of the results of this thesis. Where will deliver more efficient pipe material between galvanized and pvc. In addition, installation and maintenance cost of delivering the most cost between galvanized and pvc. The conclusion is based on data calculation in chapter 4 and theory in chapter 2.

CHAPTER 3 METHODOLOGY

3.1. Methodology Flow Chart

Methodology flow chart is the steps that will take to complete the thesis. Starting from stating the problem, literature study, collecting data, analyze the data, and making some conclusions. Here is the detail of the methodology flow chart:

3.2. Description of Methodology Flow Chart

3.2.1. Background

Background is the initial process to find some problems that will be discussed in this thesis. The objective of the thesis is to find some advice or suggestion for the problem that will be discussed. In this case, raising the issue of galvanized pipes is expensive and has excessive specifications for use in sanitary systems

There are differences and differences between sanitary systems on board and on land. Above all, Sanitary systems on the ground like at home, hotels and other buildings both use pipes. Where pipe sanitary building system on land use plastic material. The discharge of water is also not much different. The thing that could be the reason for the plastic pipe can be used for the sanitary system on the ship. The destination is a shipboard pipe must use materials that have been approved by the class. Thus, the class must approve the used plastic pipe. It also must be proven plastic pipe material used has the power that is able to work on the ship This is the background of the research using pvc pipe as an alternative to galvanized pipe.

3.2.2. Literature Study

After some problems are found, literature study must be performed. Literature study is to find some theories and facts about the problems. The problem discussed is the use of PVC pipe as an alternative material to replace the galvanized pipe. So the first literature study discusses about galvanized pipes, Includes showing galvanized pipe properties.

Next is to discuss about PVC pipe. The discussion begins by first explaining what a pvc pipe is. Where PVC (polyvinyl chloride) is a thermoplastics material consisting of PVC resin compounded with varying proportions of stabilizers, lubricants, fillers, pigments, plasticisers and processing aids. The literature study also explains some of the advantages of plastics. Moreover, explained that plastic pipe used as a distributor of drinking water.

The most important thing in this literature study is to show that plastic pipe can be used on board. In other words, the class has approved plastic pipe. Rules Classification used is DNVGL. Where DNVGL describes the use of plastic pipes is arranged in part 1 chapter 2, section 11, where the plastic pipe should be approved for piping systems that included in pipe class III only. The use of plastic pipes should also be qualified based on to their fire endurance that it has to be classified at level 1 to level 3. Fire endurance levels of plastic pipes are displayed through the Fire Endurance Requirements Matrix table. After that, the literature study discusses the analysis of sanitary systems on the ship. This analysis aims to study the sanitary system on the ship.

Then the selection of pvc and galvanized steel pipe material. Selection of this material is to choose the diameter and thickness of the pipe in accordance with the existing pipe on the ship. The selection is based on the calculation of pipe diameter and pipe thickness. However, the selection of galvanized steel pipe thickness follows the rules of the class rules. So the selected galvanized steel pipe thickness is not based on manual calculation. The selection of galvanized steel pipe diameter is only to show the calculation on the existing pipe. As well as a benchmark that the selection of pipe diameter has been in accordance with the existing pipe. Then the calculation diameter galvanized steel pipe also as a benchmark in the selection of PVC pipe diameter. After getting the PVC pipe diameter requirement, next is calculate the thickness of PVC pipe.

The results of this calculation will later be a reference in choosing PVC pipe material. After that, the literature study on the literature study will discuss about economic analysis. In this analysis will look for material costs, installation, and maintenance on PVC and Galvanized steel pipes. After that, the results of the analysis will be compared between the two and sought to know which one is more economical. The literature study

can be formed in papers, journals, thesis, data, or books that related to this problem. For the sanitary system data on the ship, the data is taken directly to MV. Sinar Sabang. So, data of sanitary uses the original data on the ship.

3.2.3. Selecting a Ship

This thesis discusses the use of PVC pipe material as an alternative to replacing galvanized steel pipes in sanitary systems, the pipe material. In other words replace existing pipes with PVC pipes. Then the system required of sanitary data on the ship. To facilitate this thesis, then selected one ship as the object of research. So the sanitary system on this vessel will be analyzed. System of sanitary in question, among others, galvanized steel pipes, pumping capacity, pipeline, pipeline installation and pipeline maintenance. The selected ship is MV. Sinar Sabang. MV. Sinar Sabang is a container ship belonging to Samudera Indonesia. MV. Sinar Sabang has Singapore-Surabaya shipping routes. This ship is chosen as the object of the thesis because it has a complete ship data. Thus the data needed to support the thesis will be easy to obtain.

3.2.4. Collecting Data

Collecting some data is very essential for every thesis. In this thesis, data that will be collected is sanitary pipe system data on MV. Sinar Sabang. Sanitary system data will be collected from MV. Sinar Sabang. The sanitary data is taken from MV. Sinar Sabang because it is the main object in this thesis. These include sanitary pipe system, and PVC specification of galvanized pipe.

In addition, general data on ships such as general arrangement is also required as supporting data. Sanitary discharge system is needed to know where the sanitary pipe is connected. From sanitary data discharge system there is also data of pipe. The collected pipe data is in the form of pipe type, pipe material, pipe diameter, and pipe thickness.

Sanitary pipe on MV. Sinar Sabang this will be analyzed to be replaced with PVC pipe material. In addition to pipes, pump data will also be taken on sanitary systems. The discharge pump will be the benchmark of the PVC pipe diameter selection. After the sanitary system data on MV. Sinar Sabang has been collected, the next is collecting PVC pipe data.

PVC pipe to be used is PVC pipe for fresh water needs. Where this pipe is usually used for sanitary systems landed. PVC pipe data is taken from brochure and manual book. The data comes from manufacturing provided on the internet. PVC pipe data will be collected for the calculation of diameter and thickness in galvanized steel and PVC pipes .. Thereafter data will be collected for cost analysis on galvanized steel pipes and PVC pipes. Cost analysis data include material costs, installation, and maintenance.

3.2.5. Analyzing Sanitary pipe system

After collecting data, the data of sanitary pipe system will be analyzed to determine the galvanized and PVC material, which will be used for sanitary system. In data analysis, will be calculated pvc pipe and galvanized steel pipe diameter for sanitary system. Pipe diameter calculation is use formula, $dH = (Q \times 4 / \pi \times v)^{1/2}$. In order, calculation will be calculated first galvanized pipe diameter requirements on ships. The calculation results will be compared with the existing pipeline. If the diameter of the calculation result is the same as the existing pipe, then the calculation is appropriate. After that, selecting diameter galvanized pipe in the market.

Next, searched pvc pipe diameter requirements on sanitary system. Pipe diameter calculation is use same formula as galvanized steel pipe. In the calculation of pvc pipe diameter will require adjustments to the class rules. Also performed a calculation of wall thickness pvc pipe required. Wall thickness calculation is intended to find the minimum wall thickness required on PVC pipe. As for the galvanized steel pipe is sufficient, Wall thickness simply choose from the results of DNVGL calculation. For Wall thickness calculations use the formula $S = S_o + c + t + b$. On the analysis of this data, it will be found that the final result pvc pipe specifications that can be used in the ship sanitary system.

3.2.6. Selecting PVC Material

From the analyzing sanitary pipe system, next is selecting pvc pipe in accordance with the data analysis calculation. How the selection of PVC pipe that is by choosing the pvc pipe products in the market. The selected pipes must be in accordance with the provisions of the class rules. It should also be in accordance with the calculation of the diameter and thickness of the pipe. Where the diameter and thickness

must be in accordance with existing pipe in MV. Sinar Sabang brands that will be used is Wavin.

3.2.7. Economical Analyzing

On this stage, will find the price of each type of pipe, and will do a price comparison. Cost analysis is performed after collecting data on installation, material, and maintenance costs. Cost data is taken from market price. With this cost data, it can be done cost comparison between PVC pipe and galvanized steel pipe. Thus, it will be determined which pipe type material is more economical to apply to the ship.

3.2.8. Make a Conclusion

Conclusion will be made after all the analysis has been done. And will be able to conclude the pipe where better technically and economically.

CHAPTER 4 DATA ANALYSIS

4.1. Data of Sanitary Pipe System

To analyze the pipe in the sanitary system, it would require an analysis on the data existing sanitary systems on ships. The selected ship is MV. Sinar Sabang as object. Galvanized pipes for sanitary system is used outside diameter 42 mm, 48 mm, 60, 76 mm, 89 mm, and 114 mm. The wall thickness of the pipe used in the sanitary system is 3 mm and 4,5 mm.

Sanitary system on the MV. Sinar Sabang, is using the 3 main pipe line. The first main pipe, as the main line of the sanitary, flows around the shower, sinks, and scupper. Two other major pipelines used to connect water closet and connected to hospital.

¹ MV. Sinar Sabang

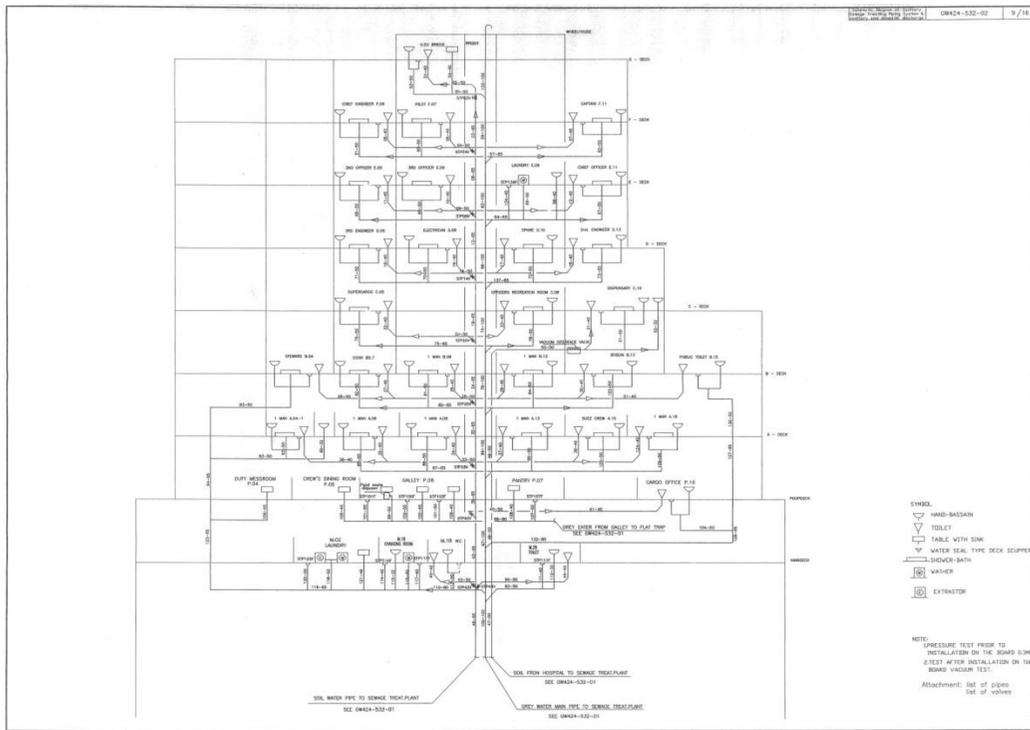

Figure 4.1. Domestic & FW Supply System²

4.2. Data of PVC Pipe

PVC pipe data is required for calculation on PVC pipe. The Calculation is to find the pipe diameter value, and the thickness of the pipe. To find the pipe diameter value, some data needed are ballast pump capacity (Q) and flow velocity (2-4) (v).

While to find the value of pipe thickness, data from the properties of the pipes are required, allowance for corrosion (C) [mm], allowance for manufacturing tolerance (t) [mm], allowance for bending (b) [mm], weld efficiency factor (v), design pressure (Pc) [bar], max permissible design stress (σ) [N/mm²], and tensile strength.

Table 4.2. PVC Pipe Properties³

| PVC Pipe Properties | | |
|-----------------------------|-------|------|
| Properties | Value | Unit |
| allowance for corrosion (C) | | mm |

² MV. Sinar Sabang

³ PVC Wavin

Table 4.2. PVC Pipe Properties³

| PVC Pipe Properties | | |
|--|------------|-------------------|
| Properties | Value | Unit |
| allowance for manufacturing tolerance (t) | | mm |
| allowance for bending (b) | | mm |
| weld efficiency factor (v) | | |
| design pressure (Pc) | | bar |
| max permissible design stress (σ) | | N/mm ² |
| tensile strength (σ_t) (20°C) | 40 | MPa |
| Specific Gravity | 1,4 | g/cm |
| Elongation (%) (20°) | 80 | % |
| Longitudinal Reversion % (150°) | 5 | % |
| Dichloromethane Resistance Test (16°C/20 menit) | No attack | |
| Vicat Softening Temperature (° C) | 79° | |
| Hydrostatic Pressure Test, (AW) Pressure resistance 1 min, 2,0 Mpa | No Failure | |
| Coefficient of linier expansion | 8x10-2 | mm/m.°K |
| Thermal conductivity | 0,15 | W/m.°K |
| Modulus of elasticity | 3000 | N/mm ² |
| Surface resistance | >1012 | ohm |

In addition to the value of properties obtained from manufacturing. Also tested the material in the form of tensile test on PVC material, so the results obtained the following comparison:

Table 4.3. Comparison of PVC properties with tensile test results

| Properties | Value | | Unit |
|---------------------------------|-------------|--------|------|
| | Manufacture | | |
| tensile strength (σ_t) | 40 | 50 | MPa |
| Strain (ϵ) | | 0.1482 | mm |
| Modulus of elasticity | 3000 | 343 | MPa |

4.3. Data Calculation

4.3.1. Pipe Diameter Calculation

Analysis results of the calculation, the diameter required in the sanitary system is 42.20mm, 60.30mm, 73mm (attachment 1.1). The results of these calculations have been compared with the original pipe on the ship. Where the comparison shows that the original pipe diameter and pipe selected is same.

The calculation of pipe diameter is for the first pipe (P1), second branch (P2) and main pipe (P3). Where the first pipe of branch is a pipe for hand-bassain, scuppers, and shower-bath. This pipe will be intended for water discharge of 5 m³ / h. The water debit is obtained from the discharge capacity of the freshwater pump. Where the calculation as follows (see attachment 1 for detail calculation):

Table 4.4. Pipe diameter calculation

| P1 | | |
|----------------------|-------------------|----------|
| Calculation | Unit | Result |
| dH = inside diameter | mm | 32 |
| Q = pump capacity. | m ³ /h | 5 |
| | m ³ /s | 0.001389 |
| v = flow velocity. | m/s | 2.5 |
| π | | 3.14 |

Thus, hand-bassain, scupper, and shower-bath pipes use pipe with inside diameter of 32.00 mm and outside diameter 42.20 mm. Next, calculate the diameter of the second branch pipe (P2). Where the second branch pipe is a meeting between the first pipe of branch (P1). This pipe will be intended for water discharge of 15 m³ / h. The water debit is obtained from the total amount of discharge of all the first branch pipes (P1). Where the calculation as table:

Table 4.5. Pipe diameter calculation

| P2 | | |
|----------------------|-------------------|----------|
| Calculation | Unit | Result |
| dH = inside diameter | mm | 50 |
| Q = pump capacity. | m ³ /h | 15 |
| | m ³ /s | 0.004167 |
| v = flow velocity. | m/s | 2.5 |
| π | | 3.14 |

Thus, the second branch pipe (P2) uses inside diameter 50.00 mm and outside diameter 60.30 mm. For the main pipe (P3), this pipe will be intended for the connecting channel of the entire second pipeline (P2). This pipe is able to pass water discharge of 30 m³ / h. The water debit is obtained from the total amount of debit of all second branch pipes (P2). Where the calculation as table:

Table 4.6. Pipe diameter calculation

| P3 | | |
|----------------------|-------------------|----------|
| Calculation | Unit | Result |
| dH = inside diameter | mm | 65 |
| Q = pump capacity. | m ³ /h | 30 |
| | m ³ /s | 0.008333 |
| v = flow velocity. | m/s | 2.5 |
| π | | 3.14 |

Thus, the main pipe (P3) uses inside diameter 65.00 mm and outside diameter 73.0 mm.

4.3.2. Wall Thickness Calculation

Analysis results of the calculation, the wall thickness is needed on pvc pipe is 0.83759 mm to 42.2mm OD pipe, 1.88mm to 60mm OD pipe, and 2.39mm to 73mm OD pipe. This calculation is the result of the formula:

$$S = S_o + c + t + b$$

The thickness of pipe diameter 42.2mm obtained from the calculation as follows:

Table 4.7. Pipe thickness calculation

| OD 42 mm | | |
|--|-------------------|---------|
| Calculation | Unit | Result |
| S = minimum thickness required | mm | 0.83759 |
| S _o = calculated thickness | mm | 0.83759 |
| d _a = outside diameter [mm] | mm | 42.2 |
| P _c = design pressure [bar] | bar | 6 |
| σ = max permissible design stress | N/mm ² | 14.8148 |
| v = weld efficiency factor | mm | 1 |
| t = allowance for manufacturing tolerance [mm] | mm | 0 |
| b = allowance for bedding [mm] | mm | 0 |

The thickness of pipe diameter 60 mm obtained from the calculation as follows:

Table 4.8. Pipe thickness calculation

| OD 60 mm | | |
|--|-------------------|---------|
| Calculation | Unit | Result |
| S = minimum thickness required | mm | 1.19088 |
| So = calculated thickness | mm | 1.19088 |
| da = outside diameter [mm] | mm | 60 |
| Pc = design pressure [bar] | bar | 6 |
| σ = max permissible design stress | N/mm ² | 14.8148 |
| v = weld efficiency factor | | |
| c = allowance for corrosion [mm] | mm | 1 |
| t = allowance for manufacturing tolerance [mm] | mm | 0 |
| b = allowance for bedding [mm] | mm | 0 |

The thickness of pipe diameter 76 mm obtained from the calculation as follows:

Table 4.9. Pipe thickness calculation

| OD 76 mm | | |
|--|-------------------|---------|
| Calculation | Unit | Result |
| S = minimum thickness required | mm | 1.5085 |
| So = calculated thickness | mm | 1.5085 |
| da = outside diameter [mm] | mm | 76 |
| Pc = design pressure [bar] | bar | 6 |
| σ = max permissible design stress | N/mm ² | 14.8148 |
| v = weld efficiency factor | | |
| c = allowance for corrosion [mm] | mm | 1 |
| t = allowance for manufacturing tolerance [mm] | mm | 0 |
| b = allowance for bedding [mm] | mm | 0 |

4.4. Pipe Material Selected

With the calculation results of pipe diameter and thickness, it can be selected the size of galvanized steel pipe and PVC pipe.

4.4.1. Galvanized Steel Pipe Selected

Selection of galvanized steel pipes In accordance with the pipe diameter calculation and pipe thickness conditions set in DNVGL. Where the selected pipe is as follows:

Table 4.10. Galvanized Steel Pipe Selected

| Pipe Selected | |
|---------------|------|
| OD | Unit |
| 42 | mm |
| 60 | mm |
| 76 | mm |
| 89 | mm |
| 114 | mm |

4.4.2. PVC Pipe Selected

The selection of pipes based on the calculation of diameter, thickness, and suitability of existing pipes. Where selected is Wavin PVC pipe with a thickness of 2 mm and diameter:

Table 4.11. PVC Pipe Selected

| Pipe Selected | |
|---------------|------|
| OD | Unit |
| 42 | mm |
| 60 | mm |
| 76 | mm |
| 89 | mm |
| 114 | mm |

Figure 4.2. PVC Pipe Wavin

4.5. Economic Analysis

4.5.1. Material Cost Analysis

Material cost analysis is done to find out the cost of sanitary pipe material procurement. Material cost analysis is done by calculating for each of the total length of pipe required. The length of the calculated pipe is the total length of pipe diameter of, 42mm, 60mm, 76mm, 89mm, and 114mm. The length of pipe to be analyzed is freshwater pipe supply, seawater pipe supply and discharge. The total length of the pipe is measured in the figure (see attachment 4.1).

In sanitary systems, water supply to be supplied to toilets, toilets, laundry and other washing channels through supply pipes. Water supply pipes deliver two types of water, fresh water and seawater, where fresh water is for toileting, washing, eating and other purposes, while sea water is used as water to clean the toilet. The total length of pipe is get from domestic pipe schematic drawing. The total length of fresh water and sea water pipe supply is as follows (see attachment 2 for pipe schematic drawing) :

Table 4.12. Fresh Water Pipe Supply for Deck G

| Deck G | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 0.8 |
| 42 | 2.5 |
| 76 | - |

In Deck G, the total length of the pipe OD 32 mm pipe is 0.8 m, for the length of the OD 42 mm pipe is 2.5 m, and the length of the OD 76 m pipe is 0 m.

Table 4.13. Fresh Water Pipe Supply for Deck F

| Deck F | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length M |
| 32 | 2.2 |
| 42 | 5 |
| 76 | 8.9 |

In Deck F, the total length of the pipe OD 32 mm is 2.2 m, for the length of the OD 42 mm pipe is 5 m, and the length of the OD 76 mm pipe is 8.9 m.

Table 4.14. Fresh Water Pipe Supply for Deck E

| Deck E | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 2.6 |
| 42 | 6.5 |
| 76 | 9,3 |

In Deck E, the total length of the pipe OD 32 mm is 2.6 m, for the length of the OD 42 mm pipe is 6.5 m, and the length of the OD 76 mm pipe is 9.3 m.

Table 4.15. Fresh Water Pipe Supply for Deck D

| Deck D | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 2.9 |
| 42 | 6.7 |
| 76 | 9.3 |

In Deck D, the total length of the pipe OD 32 mm is 2.9 m, for the length of the OD 42 mm pipe is 6.7 m, and the length of the OD 76 mm pipe is 9.3 m.

Table 4.16. Fresh Water Pipe Supply for Deck C

| Deck C | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 5 |
| 42 | 4.6 |
| 76 | 9.3 |

In Deck C, the total length of the pipe OD 32 mm is 5 m, for the length of the OD 42 mm pipe is 4.6 m, and the length of the OD 76 mm pipe is 9.3 m.

Table 4.17. Fresh Water Pipe Supply for Deck B

| Deck B | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 7.5 |
| 42 | 8.5 |
| 76 | 1.4 |

In Deck B, the total length of the pipe OD 32 mm is 7.5 m, for the length of the OD 42 mm pipe is 8.5 m, and the length of the OD 76 mm pipe is 1.4 m.

Table 4.18. Fresh Water Pipe Supply for Deck A

| Deck A | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 4 |
| 42 | 8.3 |
| 76 | 15.2 |

In Deck A, the total length of the pipe OD 32 mm is 4 m, for the length of the OD 42 mm pipe is 8.3 m, and the length of the OD 76 mm pipe is 15.2 m.

Table 4.19. Fresh Water Pipe Supply for Poop Deck

| Poop Deck | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 16 |
| 42 | 5.8 |
| 76 | 5.4 |

In Poop Deck, the total length of the pipe OD 32 mm is 16 m, for the length of the OD 42 mm pipe is 5.8 m, and the length of the OD 76 mm pipe is 5.4 m.

Table 4.20. Fresh Water Pipe Supply for Main Deck

| Main Deck | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 16 |
| 42 | 20.3 |
| 76 | - |

In Poop Deck, the total length of the pipe OD 32 mm is 16 m, for the length of the OD 42 mm pipe is 20.3 m, and the length of the OD 76 mm pipe is 0 m.

Table 4.21. Fresh Water Pipe Supply for 2nd Deck

| 2nd Deck | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | - |
| 42 | - |
| 76 | 23.9 |

In Poop Deck, the total length of the pipe OD 32 mm is 0 m, for the length of the OD 42 mm pipe is 0 m, and the length of the OD 76 mm pipe is 23.9 m.

Table 4.22. Sea Water Pipe Supply for Deck G

| Deck G | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 1.4 |
| 42 | - |
| 76 | - |

In Deck G, the total length of the pipe OD 32 mm pipe is 1.4 m, for the length of the OD 42 mm pipe is 0 m, and the length of the OD 76 m pipe is 0 m.

Table 4.23. Sea Water Pipe Supply for Deck F

| Deck F | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 2.5 |
| 42 | 7.3 |
| 76 | 1.2 |

In Deck F, the total length of the pipe OD 32 mm is 2.5 m, for the length of the OD 42 mm pipe is 7.3 m, and the length of the OD 76 mm pipe is 1.2 m.

Table 4.24. Sea Water Pipe Supply for Deck E

| Deck E | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 2.6 |
| 42 | 8.6 |
| 76 | 1.1 |

In Deck E, the total length of the pipe OD 32 mm is 2.6 m, for the length of the OD 42 mm pipe is 8.6 m, and the length of the OD 76 mm pipe is 1.1 m.

Table 4.25. Sea Water Pipe Supply for Deck D

| Deck D | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 2 |
| 42 | 2.3 |
| 76 | 8.6 |

In Deck D, the total length of the pipe OD 32 mm is 2 m, for the length of the OD 42 mm pipe is 2.3 m, and the length of the OD 76 mm pipe is 8.6 m.

Table 4.26. Sea Water Pipe Supply for Deck C

| Deck C | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 3.3 |

Table 4.26. Sea Water Pipe Supply for Deck C

| Deck C | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 42 | 7.5 |
| 76 | 1.1 |

In Deck C, the total length of the pipe OD 32 mm is 3.3 m, for the length of the OD 42 mm pipe is 7.5 m, and the length of the OD 76 mm pipe is 1.1 m.

Table 4.27. Sea Water Pipe Supply for Deck B

| Deck B | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 11.7 |
| 42 | 9.8 |
| 76 | 8.6 |

In Deck B, the total length of the pipe OD 32 mm is 11.7 m, for the length of the OD 42 mm pipe is 9.8 m, and the length of the OD 76 mm pipe is 8.6 m.

Table 4.28. Sea Water Pipe Supply for Deck A

| Deck A | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 12 |
| 42 | 2.3 |
| 76 | 8.6 |

In Deck A, the total length of the pipe OD 32 mm is 12 m, for the length of the OD 42 mm pipe is 2.3 m, and the length of the OD 76 mm pipe is 8.6 m.

Table 4.29. Sea Water Pipe Supply for Poop Deck

| Poop Deck | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 32 | 10.7 |
| 42 | 1.2 |

Table 4.29. Sea Water Pipe Supply for Poop Deck

| Poop Deck | |
|-----------------------------|---------------------|
| Size Diameter mm | Length m |
| 76 | - |

In Poop Deck, the total length of the pipe OD 32 mm is 10.7 m, for the length of the OD 42 mm pipe is 1.2 m, and the length of the OD 76 mm pipe is 0 m.

Table 4.30. Sea Water Pipe Supply for Main Deck

| Main Deck | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | 14.1 |
| 42 | 3 |
| 76 | - |

In Poop Deck, the total length of the pipe OD 32 mm is 14.1 m, for the length of the OD 42 mm pipe is 3 m, and the length of the OD 76 mm pipe is 0 m.

Table 4.31. Sea Water Pipe Supply for 2nd Deck

| 2nd Deck | |
|-----------------------------|---------------------|
| Size Diameter Mm | Length m |
| 32 | - |
| 42 | - |
| 76 | 3 |

In Poop Deck, the total length of the pipe OD 32 mm is 0 m, for the length of the OD 42 mm pipe is 0 m, and the length of the OD 76 mm pipe is 3 m.

Thus, the total length of the water pipe supply is:

Table 4.32. Total Length Water Pipe Supply

| Deck | Length of Pipe | | |
|-------------|-----------------------|-----------------|-----------------|
| | OD 42 mm | OD 48 mm | OD 76 mm |
| Deck G | 22 m | 2.5 m | 0 |

Table 4.32. Total Length Water Pipe Supply

| Deck | Length of Pipe | | |
|----------------------|----------------|--------------|--------------|
| | OD 42 mm | OD 48 mm | OD 76 mm |
| Deck F | 4.7 m | 12.3 m | 10.1 m |
| Deck E | 5.2 m | 15.1 m | 10.4 m |
| Deck D | 4.9 m | 9 m | 17.9 m |
| Deck C | 8.3 m | 12.1 m | 10.4 m |
| Deck B | 19.2 m | 18.3 m | 10 m |
| Deck A | 16 m | 10.6 m | 23.8 m |
| Poop Deck | 26.7 m | 7 m | 5.4 m |
| Main Deck | 30.1 m | 23.3 m | - |
| 2 nd Deck | - | - | 26.9 m |
| Total | 137 m | 110 m | 115 m |

After getting the total length of the supply pipe, the other pipe need is discharge pipe. Where the discharge pipes are pipes for sewer. This sewer pipe is for discharging dirty water from shower, toilet, washbasin, laundry, and other wastewater. In the total length requirements of the discharge pipe the length of the pipe is as follows:

Table 4.33. Total length of domestic discharge

| Deck | Length of Pipe | | | | | |
|----------------------|----------------|-------------|--------------|-------------|-------------|-------------|
| | 42 (mm) | 48 (mm) | 60 (mm) | 76 (mm) | 89 (mm) | 114 (mm) |
| Deck G | 8 | 5.4 | 7.9 | - | - | - |
| Deck F | 7.7 | 6.6 | 6.9 | 16.5 | - | 7.20 |
| Deck E | 8.5 | 6.2 | 22.5 | 17.1 | - | 7.20 |
| Deck D | 9 | 6.8 | 21.5 | 17.1 | - | 7.20 |
| Deck C | 7.5 | 6.8 | 28.5 | 17.1 | - | 7.20 |
| Deck B | 15.4 | 6.3 | 45.8 | 17.1 | - | 7.20 |
| Deck A | 12.5 | 6.6 | 39.8 | 18.3 | - | 7.20 |
| Poop Deck | 7.6 | 6.5 | 19.6 | - | 14.4 | 7.20 |
| Main Deck | 8.7 | 11.6 | 12.2 | 17.5 | 16.4 | - |
| 2 nd Deck | | | 11.6 | 11.9 | - | 7.2 |
| Total | 39.9 | 27.8 | 183.4 | 92.6 | 20.8 | 22.6 |

Thus, there is a need for total length of pipe on all decks. For 42 mm diameter pipe it takes a total length of 58.32 m, 48 mm diameter pipe required total length 53,825, 60 mm diameter pipe required total length of 7,436 m, 76 mm diameter pipe required total length 66.3349 m, and 114 mm diameter tube required total length 15.40 m.

From the total length of the domestic discharge and supply pipes, we get the total length of pipe needed in the sanitary system on the vessel. The overall length of the pipe is:

Table 4.34. Total length of sanitary pipe

| Deck | Length of Pipe | | | | | |
|----------------------|----------------|------------|--------------|--------------|-------------|-------------|
| | 42 (mm) | 48 (mm) | 60 (mm) | 76 (mm) | 89 (mm) | 114 (mm) |
| Deck G | 25 | 2.9 | 2.9 | - | - | - |
| Deck F | 7.4 | 13.9 | 19 | 21.6 | - | 3.2 |
| Deck E | 8.7 | 16.3 | 17.5 | 22.5 | - | 3.2 |
| Deck D | 8.9 | 10.8 | 16.5 | 30 | - | 3.2 |
| Deck C | 10.8 | 13.9 | 23.5 | 22.5 | - | 3.2 |
| Deck B | 29.6 | 21.6 | 40.8 | 22.1 | - | 3.2 |
| Deck A | 23.5 | 16.2 | 34.8 | 37.1 | - | 3.2 |
| Poop Deck | 29.3 | 12.5 | 14.6 | 5.4 | 9.4 | 3.2 |
| Main Deck | 33.8 | 29.9 | 7.2 | 12.5 | 11.4 | - |
| 2 nd Deck | 0 | 0 | 6.6 | 33.8 | - | 7.2 |
| Total | 177 | 138 | 14.31 | 173.7 | 20.8 | 29.6 |

4.5.1.1. Galvanized Steel Pipe Material Cost

Prices of galvanized steel pipes based on market prices. Galvanized steel pipes have varying prices based on the diameter or thickness of the pipe. The greater the thickness of the pipe or the diameter of the pipe, will make the price of the pipe more expensive. The price of the pipe is valid every 6 meters. On the purchase of this pipe material the price includes tax. The price of galvanized steel pipe is as follows:

Table 4.35. Price list of galvanized steel pipe⁴

| Size | Thickness | Length | Cost (Rp) |
|------|-----------|--------|-------------|
| ½" | 2,60 mm | 6 m | 155.000,- |
| ¾" | 2,60 mm | 6 m | 200.000,- |
| 1" | 3,20 mm | 6 m | 300.000,- |
| 1¼ " | 3,20 mm | 6 m | 400.000,- |
| 1½" | 3,20 mm | 6 m | 455.000,- |
| 2" | 3,60 mm | 6 m | 620.000,- |
| 2½" | 3,60 mm | 6 m | 790.000,- |
| 3" | 4,00 mm | 6 m | 1.020.000,- |
| 4" | 4,50 mm | 6 m | 1.470.000,- |
| 5" | 4,85 mm | 6 m | 2.020.000,- |
| 6" | 4,85 mm | 6 m | 2.400.000,- |
| 8" | 5,00 mm | 6 m | 3.400.000,- |

From the above cost data, we get the total cost of galvanize steel pipe material per piece is as follows:

Table 4.36. Total Cost of galvanized steel pipe material

| Galvanized Steel Pipe Material | | | |
|--------------------------------|------------------|-----------------|------------------------|
| Size (mm) | Piece (per 6 m) | Cost per piece | Total Cost |
| 42 | 57 | Rp. 400.000,- | Rp. 22,800,000 |
| 48 | 49 | Rp. 455.000,- | Rp. 22,295,000 |
| 60 | 67 | Rp. 620.000,- | Rp. 41,540,000 |
| 76 | 62 | Rp. 790.000,- | Rp. 48,980,000 |
| 89 | 26 | Rp. 1.020.000,- | Rp. 26,520,000 |
| 114 | 30 | Rp. 1.470.000,- | Rp. 44,100,000 |
| Total | | | Rp. 206,235,000 |

So the total cost of galvanized steel pipe material is Rp. **206,235,000**

4.5.1.2. PVC Pipe Material Cost

Cost of PVC pipe based on market price. PVC pipe has different price based on the diameter or thickness of pipe. The greater the thickness of the pipe or the diameter of the pipe, will make the price of the pipe

⁴ <http://www.hargamaterial.xyz/harga-pipa-pvc-galvanis-terbaru/>

more expensive. The price of the pipe is also valid every 4 meters. On the purchase of this pipe material the price includes tax. Where PVC pipe prices are as follows:

Table 4.37. Price list PVC pipe

| Size | | Type | |
|------|-----|---------------|---------------|
| inch | Mm | AW | D |
| ½" | 22 | Rp. 21,100 | Rp. - |
| ¾" | 26 | Rp. 28,800 | Rp. - |
| 1" | 32 | Rp. 39,300 | Rp. - |
| 1¼" | 42 | Rp. 58,900 | Rp. 37,000 |
| 1½" | 48 | Rp. 67,600 | Rp. 41,800 |
| 2" | 60 | Rp. 86,500 | Rp. 53,600 |
| 2½" | 76 | Rp. 126,200 | Rp. 72,400 |
| 3" | 89 | Rp. 177,800 | Rp. 96,100 |
| 4" | 114 | Rp. 294,600 | Rp. 151,200 |
| 5" | 140 | Rp. 466,800 | Rp. 233,000 |
| 6" | 165 | Rp. 654,700 | Rp. 307,300 |
| 8" | 216 | Rp. 1,098,700 | Rp. 540,500 |
| 10" | 267 | Rp. 1,698,900 | Rp. 890,300 |
| 12" | 318 | Rp. 2,394,400 | Rp. 1,249,800 |

From the above price data, we get the total cost of PVC pipe material is as follows:

Table 4.38 Total Cost of PVC pipe material

| PVC Pipe Material Cost | | | |
|------------------------|-----------------|----------------|-----------------------|
| Size (mm) | Piece (per 4 m) | Cost per piece | Total Cost |
| 42 | 76 | Rp. 58,900 | Rp. 4,476,400 |
| 48 | 64 | Rp. 67,600 | Rp. 4,326,400 |
| 60 | 90 | Rp. 86,500 | Rp. 7,785,000 |
| 76 | 82 | Rp. 126,200 | Rp. 10,348,400 |
| 89 | 28 | Rp. 177,800 | Rp. 4,978,400 |
| 114 | 35 | Rp. 294,600 | Rp. 10,311,000 |
| Total | | | Rp. 42,225,600 |

The total cost of PVC pipe material is Rp. **42,225,600**

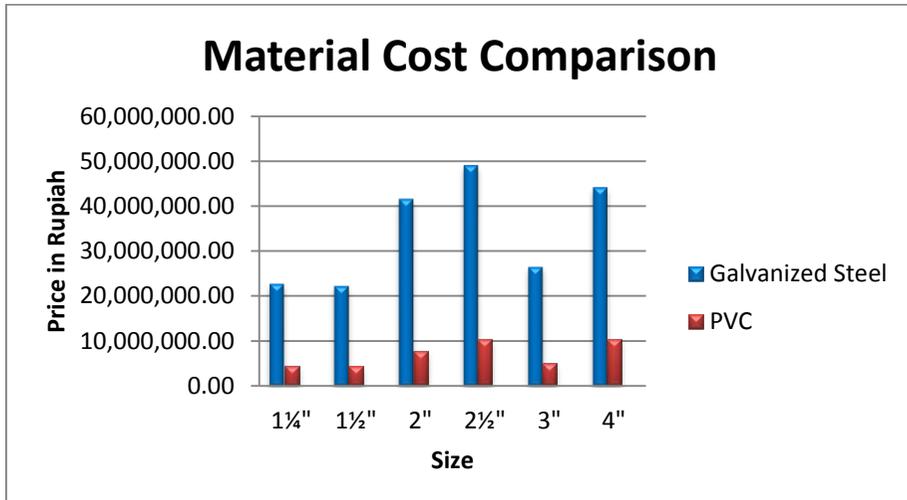

4.5.1.3 Material Cost Comparison Analysis

Galvanized steel pipes and PVC pipes have very different prices. From that difference can be compared the price difference of each pipe. Where price comparison can be seen in table:

Table 4.39. Galvanized steel pipe and PVC pipe price comparison

| Cost Comparison Analysis | | | | | |
|--------------------------|-----|------------------|----------------|----------------|-------|
| Size | | Type of Material | | Saving Cost | |
| inch | mm | Galvanized Steel | PVC | Rp | (%) |
| 1¼" | 42 | Rp. 22,800,000 | Rp. 4,476,400 | Rp. 18,323,600 | 80.4% |
| 1½" | 48 | Rp. 22,295,000 | Rp. 4,326,400 | Rp. 17,968,600 | 80.6% |
| 2" | 60 | Rp. 41,540,000 | Rp. 7,785,000 | Rp. 33,755,000 | 81.3% |
| 2½" | 76 | Rp. 48,980,000 | Rp. 10,348,400 | Rp. 38,631,600 | 78.9% |
| 3" | 89 | Rp. 26,520,000 | Rp. 4,978,400 | Rp. 21,541,600 | 81.2% |
| 4" | 114 | Rp. 44,100,000 | Rp. 10,311,000 | Rp. 33,789,000 | 76.6% |

In the table above shows that galvanized steel pipes have a price much more expensive than PVC pipe. Where the price different between galvanized steel pipe and PVC with size 1¼" is 85.3%. For pipe with size 1½" have price different equal to 85.1%. For pipe with size 2" have price difference equal to 86%. Pipes with size 2½" have price difference of 84%. Pipe with size 3" has a price difference of 82.6%, while the pipe with size 4" has a price different of 80%. The price different between galvanized steel pipe and PVC pipe can also be seen in graph form as follows:

4.5.2. Installation and Maintenance Cost Analysis

The cost of installation is the cost of services of workers in the installation of pipes. The amount of installation and maintenance costs in accordance with the material pipe. In galvanized steel pipes, the installation requires welding services. While PVC pipe does not require welding services.

Maintenance cost is the service cost of the workers in dismantling and plumbing, as well as material cost. The material difference between PVC and galvanized steel affects the treatment method of the pipe. Thus it will affect the amount of maintenance costs that will be issued.

4.5.2.1. Galvanized Steel Pipe Installation and Maintenance Analysis

Installation of galvanized steel pipe must use welding, Where welding is done by a person who has a certificate or an expert in welding. This affects the amount of service costs to be incurred. Cost analysis of galvanized steel pipe installation as follows:

Table 4.40 Installation cost of galvanized steel pipes

| Size | | Unit m | Salary |
|--------------|-----|-----------|--------------------|
| inch | Mm | | |
| 1¼" | 42 | 1 | Rp. 200,000 |
| 1½" | 48 | 1 | Rp. 250,000 |
| 2" | 60 | 1 | Rp. 282,600 |
| 2½" | 76 | 1 | Rp. 340,000 |
| 3" | 89 | 1 | Rp. 444,000 |
| 4" | 114 | 1 | Rp. 599,500 |
| Total | | | Rp. 146,000 |

From the installation cost data, the total installation cost of the pipe is as follows:

Table 4.41 Installation cost of galvanized steel pipes

| Size | | Unit m | Salary |
|------|-----|-----------|----------------|
| inch | Mm | | |
| 1¼" | 42 | 222 | Rp. 44,400,000 |
| 1½" | 48 | 173 | Rp. 43,250,000 |
| 2" | 60 | 278.4 | Rp. 78,675,840 |
| 2½" | 76 | 247.5 | Rp. 84,150,000 |
| 3" | 89 | 20.8 | Rp. 9,235,200 |
| 4" | 114 | 57.6 | Rp. 34,531,200 |

Table 4.41 Installation cost of galvanized steel pipes

| Size | | Unit m | Salary |
|------|----|--------------|------------------------|
| inch | Mm | | |
| | | Total | Rp. 294,242,240 |

As for the maintenance cost, the cost is taken from 4% investment value. In this case, investment is taken from the cost of pipe materials and installation. Then the calculation of maintenance costs as follows:

Table 4.42 Maintenance cost of galvanized steel pipes

| Size | | Unit m | Investment | Maintenance Cost |
|------|-----|--------------|----------------------|---------------------|
| inch | mm | | | |
| 1¼" | 42 | 222 | Rp. 67,200,000 | Rp. 2,688,000 |
| 1½" | 48 | 173 | Rp. 65,545,000 | Rp. 2,621,800 |
| 2" | 60 | 278.4 | Rp. 120,215,840 | Rp. 4,808,634 |
| 2½" | 76 | 247.5 | Rp. 133,130,000 | Rp. 5,325,200 |
| 3" | 89 | 20.8 | Rp. 35,755,200 | Rp. 1,430,208 |
| 4" | 114 | 57.6 | Rp. 78,631,200 | Rp. 3,145,248 |
| | | Total | Rp 20,019,089 | |

Thus, the cost of galvanized steel pipe installation is Rp. **294,242,240**, and galvanized steel pipe maintenance cost is Rp. **20,019,089**.

4.5.2.2. PVC Pipe Installation and Maintenance Analysis

Installation of PVC pipe is different from galvanized steel pipe. PVC pipe cannot be welded. Connection is using adhesive or glue. Thus it does not require welding services. This affects the amount of service costs to be incurred. Cost analysis of PVC pipe installation as follows:

Table 4.43. Installation cost of PVC pipe

| Size | | Unit M | Salary |
|------|-----|--------------|--------------------|
| inch | mm | | |
| 1¼" | 42 | 1 | Rp. 20,000 |
| 1½" | 48 | 1 | Rp. 21,000 |
| 2" | 60 | 1 | Rp. 22,000 |
| 2½" | 76 | 1 | Rp. 25,000 |
| 3" | 89 | 1 | Rp. 28,000 |
| 4" | 114 | 1 | Rp. 30,000 |
| | | Total | Rp. 146,000 |

From the installation cost data, the total installation cost of the pipe is as follows:

Table 4.44. Installation cost of PVC pipe

| Size | | Unit m | Salary |
|--------------|-----|-----------|-----------------------|
| inch | Mm | | |
| 1¼" | 42 | 222 | Rp. 4,440,000 |
| 1½" | 48 | 173 | Rp. 3,633,000 |
| 2" | 60 | 278.4 | Rp. 6,124,800 |
| 2½" | 76 | 247.5 | Rp. 6,187,500 |
| 3" | 89 | 20.8 | Rp. 582,400 |
| 4" | 114 | 57.6 | Rp. 1,728,000 |
| Total | | | Rp. 22,695,700 |

As for the maintenance cost, the cost is taken from 4% investment value. In this case, investment is taken from the cost of pipe materials and installation. Then the calculation of maintenance costs as follows:

Table 4.45 Maintenance cost of PVC pipe

| Size | | Unit m | Investment | Maintenance Cost |
|--------------|-----|-----------|----------------------|---------------------|
| inch | mm | | | |
| 1¼" | 42 | 222 | Rp. 8,916,400 | Rp. 356,656 |
| 1½" | 48 | 173 | Rp. 7,959,400 | Rp. 318,376 |
| 2" | 60 | 278.4 | Rp. 13,909,800 | Rp. 556,392 |
| 2½" | 76 | 247.5 | Rp. 16,535,900 | Rp. 661,436 |
| 3" | 89 | 20.8 | Rp. 5,560,800 | Rp. 222,432 |
| 4" | 114 | 57.6 | Rp. 12,039,000 | Rp. 481,560 |
| Total | | | Rp. 2,596,852 | |

Thus, the cost of PVC pipe installation is Rp. **22,695,700**, and PVC pipe maintenance cost is Rp. **2,596,852**.

4.5.2.3. Installation and Maintenance Cost Comparison Analysis

From the analysis result of installation cost and maintenance of galvanized steel pipe and PVC pipe, then can be done comparative analysis as follows:

Table 4.46. Installation cost comparison analysis

| Installation Cost Comparison Analysis | | | | |
|--|-----------|-------------------------|---------------|----------------------|
| Size | | Type of Material | | |
| inch | mm | Galvanized Steel | PVC | Price Gap (%) |
| 1¼" | 42 | Rp. 44,400,000 | Rp. 4,440,000 | 90.0% |
| 1½" | 48 | Rp. 43,250,000 | Rp. 3,633,000 | 91.6% |
| 2" | 60 | Rp. 78,675,840 | Rp. 6,124,800 | 92.2% |
| 2½" | 76 | Rp. 84,150,000 | Rp. 6,187,500 | 92.6% |
| 3" | 89 | Rp. 9,235,200 | Rp. 582,400 | 93.7% |
| 4" | 114 | Rp. 34,531,200 | Rp. 1,728,000 | 95.0% |

From the results of comparison analysis above, it can be concluded that galvanized steel pipes have a installation cost is much more expensive than PVC pipe. Where the average price comparison reaches 86%

For comparison analysis of maintenance cost, the analysis was done by comparing the results of PVC and galvanized steel pipe maintenance cost. The analysis can be done as follows:

Table 4.47 Maintenance cost comparison analysis

| Maintenance Cost Comparison Analysis | | | | |
|---|-----------|-------------------------|-------------|----------------------|
| Size | | Type of Material | | |
| inch | mm | Galvanized Steel | PVC | Price Gap (%) |
| 1¼" | 42 | Rp. 2,688,000 | Rp. 356,656 | 86.7% |
| 1½" | 48 | Rp. 2,621,800 | Rp. 318,376 | 87.9% |
| 2" | 60 | Rp. 4,808,634 | Rp. 556,392 | 88.4% |
| 2½" | 76 | Rp. 5,325,200 | Rp. 661,436 | 87.6% |
| 3" | 89 | Rp. 1,430,208 | Rp. 222,432 | 84.4% |
| 4" | 114 | Rp. 3,145,248 | Rp. 481,560 | 84.7% |

From the results of comparison analysis above, it can be concluded that galvanized steel pipe have a maintenance cost is much more expensive than PVC pipe, where the average price comparison reaches 88.4%.

4.5.3. Total Cost Comparison Analysis

From all result of cost analysis, hence can do comparison between installation cost, material, and maintenance of galvanized steel pipe and PVC as follows

Table 4.48 Galvanized Steel Pipe Total Cost

| Galvanized Steel | | | | |
|-------------------------|-----------|------------------------|------------------------|-----------------------|
| Size | | Cost | | |
| inch | mm | Material | Installation | Maintenance |
| 1¼" | 42 | Rp. 22,800,000 | Rp. 44,400,000 | Rp. 2,688,000 |
| 1½" | 48 | Rp. 22,295,000 | Rp. 43,250,000 | Rp. 2,621,800 |
| 2" | 60 | Rp. 41,540,000 | Rp. 78,675,840 | Rp. 4,808,634 |
| 2½" | 76 | Rp. 48,980,000 | Rp. 84,150,000 | Rp. 5,325,200 |
| 3" | 89 | Rp. 26,520,000 | Rp. 9,235,200 | Rp. 1,430,208 |
| 4" | 114 | Rp. 44,100,000 | Rp. 34,531,200 | Rp. 3,145,248 |
| TOTAL | | Rp. 206,235,000 | Rp. 294,242,240 | Rp. 20,019,090 |

Table 4.49 PVC Pipe Total Cost

| PVC | | | | |
|--------------|-----------|-----------------------|-----------------------|----------------------|
| Size | | Cost | | |
| inch | mm | Material | Installation | Maintenance |
| 1¼" | 42 | Rp. 4,476,400 | Rp. 4,440,000 | Rp. 356,656 |
| 1½" | 48 | Rp. 4,326,400 | Rp. 3,633,000 | Rp. 318,376 |
| 2" | 60 | Rp. 7,785,000 | Rp. 6,124,800 | Rp. 556,392 |
| 2½" | 76 | Rp. 10,348,400 | Rp. 6,187,500 | Rp. 661,436 |
| 3" | 89 | Rp. 4,978,400 | Rp. 582,400 | Rp. 222,432 |
| 4" | 114 | Rp. 10,311,000 | Rp. 1,728,000 | Rp. 481,560 |
| TOTAL | | Rp. 42,225,600 | Rp. 22,695,700 | Rp. 2,596,852 |

In the table above can be seen the total comparison of material costs, installation and maintenance between galvanized pipe and PVC pipe.

CHAPTER 5

CONCLUSION & SUGGESTION

5.1 Conclusion

Based on the results and analysis data obtained from the previous chapter, it can be concluded:

1. There is a big difference between the price of galvanized steel pipe material with PVC pipe, ie 80% -86%
2. There is a difference in the installation of galvanized steel pipe with PVC pipe, where the galvanized pipe must be connected with the welding method, while the PVC pipe uses adhesive / weld.
3. In the installation of PVC pipe, still have to use galvanized steel pipe material for connection with plate.
4. There is a difference in price of galvanized steel pipe installation with PVC pipe, which is about 80-86%.

5.2 Suggestion

1. In the installation that must be penetrated on the plate, the pipe material used still use galvanized steel pipe, after that galvanized steel pipe will be connected with PVC pipe

ATTACHMENT 1

Pipe Diameter Calculation

a. Calculation of Pipes in Deck G

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Table with sink Pipe (P1)

$$\begin{aligned} Q \text{ pump} &= 5.00 && \text{m}^3/\text{h} \\ &= 0.001389 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0007 && \text{m} \\ D &= 26.60 && \text{mm} \\ &= 1.047 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 32.00 | mm |
| Outside diameter | = | 42.20 | mm |

2) Calculation Of Hand-Bassain + Scupper + Table with sink Pipe (P2)

$$\begin{aligned} Q \text{ pump} &= 15.00 && \text{m}^3/\text{h} \\ &= 0.004166667 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0021 && \text{m} \\ D &= 46.08 && \text{mm} \\ &= 1.814 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 50.00 | mm |
| Outside diameter | = | 60.30 | mm |

b. Calculation of Pipes in Deck F

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$Q \text{ pump} = 5.00 \quad \text{m}^3/\text{h}$$

$$v \text{ flow} = 0.001389 \text{ m}^3/\text{s}$$

$$= 2.5 \text{ m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= \frac{1}{4} \times \pi \times D^2 \times v$$

$$D = Q / (\frac{1}{4} \times \pi \times v)$$

$$= 0.0007 \text{ m}$$

$$D = 26.60 \text{ mm}$$

$$= 1.047 \text{ inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{32.00} \text{ mm}$$

$$\text{Outside diameter} = \mathbf{42.20} \text{ mm}$$

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$Q \text{ pump} = 15.00 \text{ m}^3/\text{h}$$

$$= 0.0041666667 \text{ m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \text{ m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= \frac{1}{4} \times \pi \times D^2 \times v$$

$$D = Q / (\frac{1}{4} \times \pi \times v)$$

$$= 0.0021 \text{ m}$$

$$D = 46.08 \text{ mm}$$

$$= 1.814 \text{ inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{50.00} \text{ mm}$$

$$\text{Outside diameter} = \mathbf{60.30} \text{ mm}$$

3) Calculation Of Q3 Pipe

$$Q \text{ pump} = 30.00 \text{ m}^3/\text{h}$$

$$= 0.0083333333 \text{ m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \text{ m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= \frac{1}{4} \times \pi \times D^2 \times v$$

$$D = Q / (\frac{1}{4} \times \pi \times v)$$

$$= 0.0042 \text{ m}$$

$$D = 65.16 \text{ mm}$$

$$= 1.814 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{65.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{73.00} \quad \text{mm}$$

c. Calculation of Pipes in Deck E

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$Q \text{ pump} = 5.00 \quad \text{m}^3/\text{h}$$

$$= 0.001389 \quad \text{m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \quad \text{m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= 1/4 \times \pi \times D^2 \times v$$

$$D = Q / (1/4 \times \pi \times v)$$

$$= 0.0007 \quad \text{m}$$

$$D = 26.60 \quad \text{mm}$$

$$= 1.047 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{32.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{42.20} \quad \text{mm}$$

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$Q \text{ pump} = 15.00 \quad \text{m}^3/\text{h}$$

$$= 0.004166667 \quad \text{m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \quad \text{m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= 1/4 \times \pi \times D^2 \times v$$

$$D = Q / (1/4 \times \pi \times v)$$

$$= 0.0021 \quad \text{m}$$

$$D = 46.08 \quad \text{mm}$$

$$= 1.814 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{50.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{60.30} \quad \text{mm}$$

3) Calculation Of Q3 Pipe

$$\begin{aligned} Q \text{ pump} &= 30.00 && \text{m}^3/\text{h} \\ &= 0.008333333 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0042 && \text{m} \\ D &= 65.16 && \text{mm} \\ &= 1.814 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{65.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{73.00} && \text{mm} \end{aligned}$$

d. Calculation of Pipes in Deck D

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$\begin{aligned} Q \text{ pump} &= 5.00 && \text{m}^3/\text{h} \\ &= 0.001389 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0007 && \text{m} \\ D &= 26.60 && \text{mm} \\ &= 1.047 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{32.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{42.20} && \text{mm} \end{aligned}$$

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$\begin{aligned} Q \text{ pump} &= 15.00 && \text{m}^3/\text{h} \\ &= 0.004166667 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\
 D &= Q / (1/4 \times \pi \times v) \\
 &= 0.0021 \quad \text{m} \\
 D &= 46.08 \quad \text{mm} \\
 &= 1.814 \quad \text{inches}
 \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned}
 \text{Nom. Dia/ N.B} &= \mathbf{50.00} \quad \text{mm} \\
 \text{Outside diameter} &= \mathbf{60.30} \quad \text{mm}
 \end{aligned}$$

3) Calculation Of Q3 Pipe

$$\begin{aligned}
 Q \text{ pump} &= 30.00 \quad \text{m}^3/\text{h} \\
 &= 0.008333333 \quad \text{m}^3/\text{s} \\
 v \text{ flow} &= 2.5 \quad \text{m/s}
 \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\
 D &= Q / (1/4 \times \pi \times v) \\
 &= 0.0042 \quad \text{m} \\
 D &= 65.16 \quad \text{mm} \\
 &= 1.814 \quad \text{inches}
 \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned}
 \text{Nom. Dia/ N.B} &= \mathbf{65.00} \quad \text{mm} \\
 \text{Outside diameter} &= \mathbf{73.00} \quad \text{mm}
 \end{aligned}$$

e. Calculation of Pipes in Deck C

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$\begin{aligned}
 Q \text{ pump} &= 5.00 \quad \text{m}^3/\text{h} \\
 &= 0.001389 \quad \text{m}^3/\text{s} \\
 v \text{ flow} &= 2.5 \quad \text{m/s}
 \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\

 &= 0.0007 \quad \text{m} \\
 D &= 26.60 \quad \text{mm}
 \end{aligned}$$

$$= 1.047 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{32.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{42.20} \quad \text{mm}$$

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$Q \text{ pump} = 15.00 \quad \text{m}^3/\text{h}$$

$$= 0.004166667 \quad \text{m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \quad \text{m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= \frac{1}{4} \times \pi \times D^2 \times v$$

$$D = Q / (\frac{1}{4} \times \pi \times v)$$

$$= 0.0021 \quad \text{m}$$

$$D = 46.08 \quad \text{mm}$$

$$= 1.814 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{50.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{60.30} \quad \text{mm}$$

3) Calculation Of Q3 Pipe

$$Q \text{ pump} = 30.00 \quad \text{m}^3/\text{h}$$

$$= 0.008333333 \quad \text{m}^3/\text{s}$$

$$v \text{ flow} = 2.5 \quad \text{m/s}$$

Specification of pipe diameter =

$$Q = A \times V$$

$$= \frac{1}{4} \times \pi \times D^2 \times v$$

$$D = Q / (\frac{1}{4} \times \pi \times v)$$

$$= 0.0042 \quad \text{m}$$

$$D = 65.16 \quad \text{mm}$$

$$= 1.814 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

$$\text{Nom. Dia/ N.B} = \mathbf{65.00} \quad \text{mm}$$

$$\text{Outside diameter} = \mathbf{73.00} \quad \text{mm}$$

f. Calculation of Pipes in Deck B

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$\begin{aligned} Q \text{ pump} &= 5.00 && \text{m}^3/\text{h} \\ &= 0.001389 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0007 && \text{m} \\ D &= 26.60 && \text{mm} \\ &= 1.047 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{32.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{42.20} && \text{mm} \end{aligned}$$

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$\begin{aligned} Q \text{ pump} &= 15.00 && \text{m}^3/\text{h} \\ &= 0.004166667 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0021 && \text{m} \\ D &= 46.08 && \text{mm} \\ &= 1.814 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{50.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{60.30} && \text{mm} \end{aligned}$$

3) Calculation Of Q3 Pipe

$$\begin{aligned} Q \text{ pump} &= 30.00 && \text{m}^3/\text{h} \\ &= 0.008333333 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\
 D &= Q / (1/4 \times \pi \times v) \\
 &= 0.0042 \quad \text{m} \\
 D &= 65.16 \quad \text{mm} \\
 &= 1.814 \quad \text{inches}
 \end{aligned}$$

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 65.00 | mm |
| Outside diameter | = | 73.00 | mm |

g. Calculation of Pipes in Deck A

Room : Man A.06, Man A.08, Man A.13, Man A.15

1) Calculation Of Hand-Bassain, Scupper, & Shower-Bath Pipe (P1)

$$\begin{aligned}
 Q \text{ pump} &= 5.00 \quad \text{m}^3/\text{h} \\
 &= 0.001389 \quad \text{m}^3/\text{s} \\
 v \text{ flow} &= 2.5 \quad \text{m/s}
 \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\
 D &= Q / (1/4 \times \pi \times v) \\
 &= 0.0007 \quad \text{m} \\
 D &= 26.60 \quad \text{mm} \\
 &= 1.047 \quad \text{inches}
 \end{aligned}$$

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 32.00 | mm |
| Outside diameter | = | 42.20 | mm |

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$\begin{aligned}
 Q \text{ pump} &= 15.00 \quad \text{m}^3/\text{h} \\
 &= 0.004166667 \quad \text{m}^3/\text{s} \\
 v \text{ flow} &= 2.5 \quad \text{m/s}
 \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned}
 Q &= A \times V \\
 &= 1/4 \times \pi \times D^2 \times v \\
 D &= Q / (1/4 \times \pi \times v) \\
 &= 0.0021 \quad \text{m} \\
 D &= 46.08 \quad \text{mm}
 \end{aligned}$$

$$= 1.814 \quad \text{inches}$$

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 50.00 | mm |
| Outside diameter | = | 60.30 | mm |

3) Calculation Of Q3 Pipe

| | | | |
|--------|---|-------------|-------------------|
| Q pump | = | 30.00 | m ³ /h |
| | = | 0.008333333 | m ³ /s |
| v flow | = | 2.5 | m/s |

Specification of pipe diameter =

| | | | |
|---|---|--------------------------------------|--------|
| Q | = | A x V | |
| | = | $1/4 \times \pi \times D^2 \times v$ | |
| D | = | $Q / (1/4 \times \pi \times v)$ | |
| | = | 0.0042 | m |
| D | = | 65.16 | mm |
| | = | 1.814 | inches |

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 65.00 | mm |
| Outside diameter | = | 73.00 | mm |

h. Calculation of Pipes in Poop Deck

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Food Waste Disposer, Scupper, & Table with sink Pipe (P1)

| | | | |
|--------|---|----------|-------------------|
| Q pump | = | 5.00 | m ³ /h |
| | = | 0.001389 | m ³ /s |
| v flow | = | 2.5 | m/s |

Specification of pipe diameter =

| | | | |
|---|---|--------------------------------------|--------|
| Q | = | A x V | |
| | = | $1/4 \times \pi \times D^2 \times v$ | |
| D | = | $Q / (1/4 \times \pi \times v)$ | |
| | = | 0.0007 | m |
| D | = | 26.60 | mm |
| | = | 1.047 | inches |

So, the selected types of galvanized steel pipe =

| | | | |
|------------------|---|--------------|----|
| Nom. Dia/ N.B | = | 32.00 | mm |
| Outside diameter | = | 42.20 | mm |

2) Calculation Of Hand-Bassain + Scupper + Shower-Bath Pipe (P2)

$$\begin{aligned} Q \text{ pump} &= 45.00 && \text{m}^3/\text{h} \\ &= 0.0125 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0064 && \text{m} \\ D &= 79.81 && \text{mm} \\ &= 3.142 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{80.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{89.00} && \text{mm} \end{aligned}$$

i. Calculation of Pipes in Main Deck

Room : Man A.06, Man A.08, Man A.13, Man A.15, Man A.15

1) Calculation Of Hand-Bassain, Scupper, Table with sink, Washer, & Exstrastor Pipe (P1)

$$\begin{aligned} Q \text{ pump} &= 5.00 && \text{m}^3/\text{h} \\ &= 0.001389 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= 1/4 \times \pi \times D^2 \times v \\ D &= Q / (1/4 \times \pi \times v) \\ &= 0.0007 && \text{m} \\ D &= 26.60 && \text{mm} \\ &= 1.047 && \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{32.00} && \text{mm} \\ \text{Outside diameter} &= \mathbf{42.20} && \text{mm} \end{aligned}$$

2) Calculation Of Hand-Bassain + Scupper Pipe (P2)

$$\begin{aligned} Q \text{ pump} &= 10.00 && \text{m}^3/\text{h} \\ &= 0.002777778 && \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 && \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= \frac{1}{4} \times \pi \times D^2 \times v \\ D &= Q / (\frac{1}{4} \times \pi \times v) \\ &= 0.0014 \quad \text{m} \\ D &= 37.62 \quad \text{mm} \\ &= 1.481 \quad \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{42.00} \quad \text{mm} \\ \text{Outside diameter} & \quad \text{mm} \end{aligned}$$

3) Calculation Of Hand-Bassain + Scupper + Table with sink + Washer + Exstrator Pipe (Q3)

$$\begin{aligned} Q \text{ pump} &= 45.00 \quad \text{m}^3/\text{h} \\ &= 0.0125 \quad \text{m}^3/\text{s} \\ v \text{ flow} &= 2.5 \quad \text{m/s} \end{aligned}$$

Specification of pipe diameter =

$$\begin{aligned} Q &= A \times V \\ &= \frac{1}{4} \times \pi \times D^2 \times v \\ D &= Q / (\frac{1}{4} \times \pi \times v) \\ &= 0.0064 \quad \text{m} \\ D &= 79.81 \quad \text{mm} \\ &= 3.142 \quad \text{inches} \end{aligned}$$

So, the selected types of galvanized steel pipe =

$$\begin{aligned} \text{Nom. Dia/ N.B} &= \mathbf{80.00} \quad \text{mm} \\ \text{Outside diameter} &= \mathbf{89.00} \quad \text{mm} \end{aligned}$$

ATTACHMENT 2

Biography

Angya Prambiksono, Born in Balikpapan, East Kalimantan, on Friday, November 3, 1995. The author began his education in 2001 until 2007 at the elementary school at the Elementary School National KPS Balikpapan, East Kalimantan. In that same year the author continued his education at the National Junior High School of KPS Balikpapan East Kalimantan until 2010. After graduating from the First High School, the author continued his education at Senior High School 2 Balikpapan East Kalimantan until 2013. Currently the author continues his education tiered Which is higher in Sepuluh

Nopember Institute of Technology Surabaya by taking the major Marine Engineering Department.
